

AI Travel Planner Agent - Problem Statement

The Challenge

Planning a trip often requires searching multiple websites for destinations, hotels, transportation, attractions, budgets, and travel advice. This process is time-consuming and may not produce personalized travel plans that match a user's preferences, budget, and travel duration.

The Objective

Build an AI-powered Travel Planner Agent that generates personalized travel itineraries and recommendations based on destination, budget, travel duration, interests, travel type, and number of travellers.

Key Features

- Personalized day-wise itineraries.
- Hotel and attraction recommendations.
- Budget estimation and travel tips.
- Transportation and safety guidance.
- Interactive AI chat for follow-up questions.

Technology Used

IBM BOB, IBM watsonx.ai, Meta Llama 3.3 70B Instruct, Flask, Python, HTML, CSS, Bootstrap, GitHub.

Expected Outcome

Provide users with fast, intelligent, and personalized travel planning through an AI-powered web application.
